EDUCATION

University of Maryland, Baltimore County | *Baltimore, MD*

Bachelor of Science in Computer Science

Expected May 2027

Relevant Coursework: Data Structures, Database Management, Discrete Structures, Computer Science I & II (Python & C++),

Computer Organization & Assembly Language Programming, Calculus I & II, and Computer Ethics.

Activities and Societies: hackUMBC, Google Dev Student Clubs, STARS Computing Corps

TECHNOLOGY SKILLS

Languages: Python, C++, JavaScript

Technologies: Linux, React.js, MongoDB Compass, Flask, Tkinter, WordPress, Git, Excel, Tailwind CSS, Font Awesome, API integration, HTML/CSS

EXPERIENCE

Tech Team Organizer | **hackUMBC**

Nov 2024 - Present

- Planned technologies workshops with my team
- Working out the judging logistics for the hackathon; this includes scripts to handle hackathon project assignment to judges and project validity.
- Currently assisting in building our new mobile application for our hackathon in the fall (using ReactNative)

Recruitment Coordinator | **STARS Computing Corps**

May 2025 – Present

- Organizing recruiting events and managing the recruitment selection process. Contributing to my STARS chapter's research project for the Spring semester.

IT intern | **CHOYCES, LLC**

Jul 2024 – Aug 2024

- Provided hardware/software support, resolved user issues, and managed new account setups and password recovery.
- Monitored network performance daily and responded to system usability concerns.

PROJECT EXPERIENCE

Library System | C++, I/O system, HTML & CSS, JS

Sep 2024 & Jul 2025

- A library system that mimics the functionality of a physical library such as adding, retrieving, waitlisting, deleting, and searching for books by title.
- The system uses a linked list and file I/O in C++ to store and manage book data efficiently. The website version of this library system allows book searching by title, author, year, and rating.

Resume Generator | React.js, Font Awesome

Aug 2025

- Built a customizable resume generator using React. The application has a layout of computer science resume but can be altered to fit other fields.
- With every change done on the application, the information is saved onto the user's local storage on their device for later retrieval. The user is also allowed to make changes to the application as many times as possible to get a resume that fully matches their experience.

Course Selection Application | C++

Dec 2025

- This application allows users to log in to their course system, as students, and enroll in courses. It allows users to enroll in courses within the allowed space, waitlist in a full course, and a drop a course.
- The waitlist is structured as an array and uses a merge sort algorithm to structure the student, prioritizing students with higher priorities to the earlier slots of the array. The course enrolment structure has a first come, first serve priority.
